

Protocols

part two

After many years of working with and monitoring patients, I have come up with a system that is simple, natural, and inexpensive. I mine, cut, and measure the material myself. This is to ensure that the material is of a low level and cannot be abused. If it is abused, we will literally drop the ball again on a healing modality that is unequaled. The levels of radiation are high enough to create a response from the body, but not high enough to overwhelm it. Since we are working with natural radiation, we are using alpha, beta, and gamma rays. Not XRay. I researched an article some time ago that talked about using low dose irradiation on children of only 20 cGy. Good grief, that's 20 Rem, which is 20,000 mRem in one session! That's not low dose, that's destructive! The levels we are using are anywhere from 0.05 to 13 mRem/hr depending on what and where we are using the item. This also allows us to use radiation at a slow monitored rate.

I have put together a kit that I have made a standard for the treatment of health issues and continued prevention of future unfavorable health conditions. This consists of a Stone, a mud pack, and a water stone. On the following page is a copy of the information and instructions I send with every kit. After reviewing this, you will have a better understanding on the process.

There are a couple other items that I use when working with someone who is in a more serious condition. One is a regular carnotite stone that emits between 4 and 6 mRem/hr to be put directly on a tumor or affected area when we need a quicker response. These are strong and you only want people to have them on their body for about eight hours a day. Usually I do not use them until the patient has had time to acclimate to the radiation in the kit. About 3 to 7 days depending on their initial body's response. After the original problem needing immediate attention has been eliminated, it is best to slowly back off using this stone. Even though it is of such a low level that it would never harm, it is still best to be cautious.

The other item is a necklace with a carnotite stone in it. When you are working with someone with breast cancer or a problem in the chest area, they can easily wear this for eight hours a day. It is very effective.

Although most people have been cancer free or relieved of any other disorder in under four months, I usually explain to them that we are looking at a four month time frame.

One thing I want to mention is about tumors or masses. I have found that after working with someone after the four month period they will many times still have a smaller mass or tumor that seems to be stagnate. After confirming that they are cancer free, you can just assume that you are working with scar tissue.

Some people have asked if you must have an affliction to use radiation hormesis. The answer is no. Even if you are healthy, using radiation hormesis is an extremely efficient way of avoiding future health issues.

Last, remember that diet is essential for radiation hormesis to take affect. You can get the body to work, but it needs fuel to operate.
